```
using System;
namespace primeNumber
{
   public class Program
   {
      public static void Main(string[] args)
      {
        int i, j;
          // Console.WriteLine("primeNumber between 5 to 18");
          for (i = 5; i <= 18; i++)
          {
              int count = 0;
              for (j = 1; j <= i; j++)
              {
                  if (i % j == 0)
                  { count = count + 1; }
              }
              if (count <= 2)
              { Console.WriteLine(i); }
          }
      }
   }
}
```
